

# Working with your Tecniplast IVC System Course

A personalised approach to your IVC caging, Air Handling Units, Change stations and your working practices...

This course is designed for you working with your Tecniplast IVC System.....

## Why choose this course?

- Delivered either on your site or at Tecniplast UK
- Suitable for experienced technicians
- Uses your Tecniplast IVC System

## We deliver outstanding course content through:

- Interactive IVC System workshop
- Supporting presentations
- Accompanying Resource Pack

## Course outcomes:

- Written test
- Practical & oral competency tests
- Application of knowledge to scenarios
- Competent staff
- 6 CPD points

## Know your Tecniplast IVC System

'What if' scenarios, impacts & solutions

Optimise regimes & working practices

Features, component functions & interlinks

Maximise animal welfare & safety

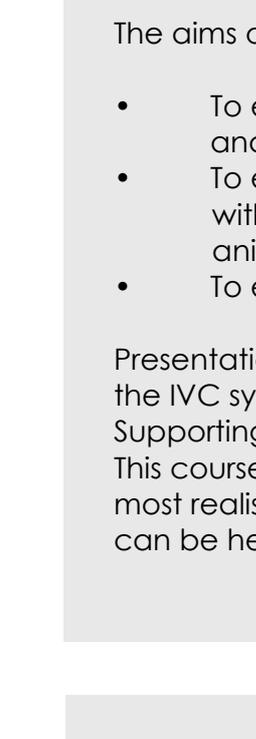

Technician health

Research data

# Working with your Tecniplast IVC System

Tecniplast and Cambium Development are delighted to bring you the '**Working with your Tecniplast IVC System**' course. The aim of the course is to provide delegates with an indepth understanding of IVC systems. It will look indetail at the consequent effect on animal health and welfare of an number of scenarios that can take place within the an IVC Sytem.

**Timings and venue:** Bespoke to your requirements **Cost:** Price on application

\*Includes a £10 donation to the Animals in Science Education Trust

**Dates:** To fit into your schedule and programme of work

**Want to ensure that your experienced animal technicians have detailed knowledge of the system to optimize its use for high standards of animal care? Then try the 'Working with Your Tecniplast IVC System' course.....**

The "Working With" course provides a more tailored and detailed approach to your specific generation of IVC equipment and is written and delivered with this in mind. This course focusses on the IVC system as a whole so that attendees understand its function and operation knowing what each element's vital contribution is in maintaining the standard of care for the animals.

The aims of the course are:

- To ensure that your experienced technicians have the same level of knowledge and that this knowledge is correct rather than acquired second hand.
- To establish a link in the technician's mind between scenarios they see occurring within the IVC system, or an action they undertake and any consequent effect on animal health and welfare.
- To ensure smooth, optimal use of your Tecniplast IVC system

Presentation of information is provided predominantly through practical demonstration on the IVC system itself with a high level of interaction with their peers and the trainers. Supporting summaries of the topics covered are given using high quality presentations. This course can be delivered at your own site using your IVC system in order to provide the most realistic and practical experience for your technicians. Alternatively if you prefer it can be held at TUK's excellent training facilities.

If you would like any further information or to book delegates onto this course then please contact **Noleen** on **0845 0504556** or by email **noleen@tecniplastuk.com**
