

The **NEW Transit Line HD** is designed to accommodate even more cages, providing extra space for your experiments. With the addition of the **NEW humidification control** in the Recovery Rack, humidity is now easily adjustable.

Thanks to the compact design of the **Transit Line HD**, you can move between different rooms or buildings while maintaining optimal environmental conditions and ensuring maximum animal welfare.

The whole Transit Line range of products can be equipped with a **Lightning Control System**, which includes a red cabin and programmable LED lights, to study how animals respond to circadian rhythm alterations.

The new **Recovery Rack with Humidification** is designed to ensure that humidity, temperature, and ventilation are controlled inside the home cage during experiments and post-surgical treatment. The Recovery Rack with Humidification is the ideal solution to ensure animal welfare and isolate selected weak or sick animals for veterinary inspection or treatment.

Thanks to the trolley's compact design, moving experiments around has never been so easy!

ANIMAL WELFARE

- This Transport Trolley HD ensures that every cage receives a **controlled ventilation** when they are moved between their stock/breeding racks to the experimental area or between barriered units.
- The Recovery rack with Humidification ensures that each cage is maintained at a **defined humidity and temperature**, facilitating animal recovery after experimental procedures and mitigating the impact of dry air when higher temperatures are needed.
- Internal batteries support your animals' safety when the main supply is not connected or in the event of a power outage.

ERGONOMICS

- All racks are at an **optimal height**, facilitating the movement and access to all cages.
- The wide and **user-friendly touch screen** provides an easy-to-use interface.
- The trolley is **compact** and **easy to move**.

FLEXIBILITY

- Different mini racks can be installed, including the new ER1050 and ER1800 cage models, featuring up to 21 EM500 and 18 GM500 cages. The racks can be **removed, autoclaved**, and **easily exchanged** when needed.
